1. **In this question you must show all stages of your working.**
Solutions relying on calculator technology are not acceptable.

The curve C has equation

$$y = \frac{3x - 2}{(x - 2)^2} \qquad x \neq 2$$

The point P on C has x coordinate 4

Find an equation of the normal to C at the point P in the form $ax + by + c = 0$, where a, b and c are integers.

(6)

(Total for Question 1 is 6 marks)

---

2. Given that

$$\mathrm{f}(x) = \frac{4}{3x+5} \qquad x > 0$$

$$\mathrm{g}(x) = \frac{1}{x} \qquad x > 0$$

(a) state the range of f,

(2)

(b) find f^{-1}

(3)

(c) find $\mathrm{fg}(x)$.

(1)

(d) Show that the equation $\mathrm{fg}(x) = \mathrm{gf}(x)$ has no real solutions.

(4)
