7. **In this question you must show all stages of your working.**
Solutions relying entirely on calculator technology are not acceptable.

(i) Solve, for $0 \leqslant \theta < 180°$, the equation

$$7\sin 2\theta = 5\cos 2\theta$$

giving your answers, in degrees, to one decimal place.

(4)

(ii) Solve, for $0 \leqslant x < 2\pi$, the equation

$$24\tan x = 5\cos x$$

giving your answers, in radians, to 3 decimal places.

(5)

8. A curve has equation $y = (x + 2)^2(4 - x)$

The finite region R is bounded by the curve and the x-axis.

(a) Using algebraic integration and showing each step of your working, find the exact area of R.

(5)

(b) Using the answer to part (a) and explaining your reasoning, find the area of the finite region bounded by the curve with equation $y = (3x + 6)^2\left(2 - \frac{1}{2}x\right)$ and the x-axis.
